

ABSTRACT OF THE DISCLOSURE

An algorithm and method for using computer services for facilitating the meeting and communication of individuals in a social networking environment. The algorithm and method allow for individuals using differing modes of communication, for example one using voice communication and another using computer communication, to be in direct communication with one another. The algorithm and method also facilitate direct communication when one party locates a potential candidate and is desirous of being in direct communication with that candidate. Message recording and playback are also facilitated as well as other advantages arising from the use of the algorithm and software program derived therefrom as well as the method of the invention.
